

Measuring your feet

Measuring Tips: keep tape firm but not too tight. If you have a specific problem (e.g. a bunion) it is helpful to mark its location on your foot chart.

1. MEASURING AROUND

Place both your feet on two pieces of paper on a smooth, firm floor. Keeping upright, with weight balanced, have someone draw right around both feet. Pencil or pen should be at a very slight angle.

2. MEASURING JOINT

Using a household tape, measure joint by passing tape around your foot, behind the little toe and over the joint of the big toe. i.e. you are measuring the WIDEST PART OF EACH FOOT.

LEFT JOINT: mm

RIGHT JOINT: mm

3. MEASURING INSTEP

Pass tape around the centre of each instep. i.e. you are measuring the HIGHEST PART OF YOUR FOOT.

LEFT INSTEP: mm

RIGHT INSTEP: mm

4. OTHER INFORMATION

What is your usual shoe size?

Do you have problems fitting shoes, including any medical condition* that may affect your feet? If so, it is helpful to mark on your chart the exact location of your problem area. As well, please give a brief written description below:

* Feet are affected by a wide range of problems, some straightforward, some complex. MCKINLAYS have over 100 years experience making comfortable shoes that fit. However, some foot conditions require specialist medical assessment. We will advise you if we feel you should seek such advice before having your own lasts fitted or shoes made.
